CORE SKILLS

Backend & APIs
Python, FastAPI, Flask, Node.js, NestJS, PHP, REST, WebSockets, webhooks, microservices

Frontend
TypeScript, React, Redux, Angular, Material-UI, Tailwind CSS

Databases
PostgreSQL, MySQL, MongoDB, Redis; indexing, caching, schema design

Cloud & DevOps
Docker, GitHub Actions CI/CD, Jenkins, AWS (S3), Azure, Huawei Cloud, Linux, Git

Security & Governance
JWT, RBAC, 2FA/MFA, audit logging, tokenisation, VAPT remediation, data-protection compliance, SSDLC

AI-Assisted Engineering
Cursor, Claude, ChatGPT for development, tests, review and QA; all generated code reviewed and tested by me

Mobile
Kotlin, Swift, Flutter, Android (Java)

Testing & Practice
Jest, JUnit, integration and UAT testing, system design, Agile/Scrum, technical documentation

SANSIKA KODITHUWAKKU

Full-Stack & · Software Engineer

Python/FastAPI · TypeScript/React · PostgreSQL · Docker · GitHub Actions CI/CD

PROFILE

Software engineer with 3+ years shipping and operating production full-stack applications in regulated fintech, from requirements to rollout and long-term maintenance. I build Python/FastAPI and React systems on relational databases with secure, governed integrations (JWT, RBAC, 2FA, audit logging, idempotent payment flows, VAPT-ready hardening). I turn recurring needs into reusable patterns, work daily with AI-assisted tools (Cursor, Claude), and led junior developers on a system serving 100+ users. Completing an MSc in Computer Science at the University of Eastern Finland.

KEY RESULTS

LKR 70M
in sales from FinAb, a loan-origination app I owned end to end

98%+
payment success rate on the gateway integration

4–5 min
bank payments, down from 1-2 business days

93%
faster reporting on 1M+ monthly transactions (4 h to 15 min)

EXPERIENCE

Senior Executive, Software Engineer (Full-Stack) — Oct 2023 - Aug 2026

Abans Finance PLC · promoted from Junior Executive · fintech payments, lending and internal systems

Secure Document Management System — FastAPI · React · S3 · Docker

- Built the backend and frontend, stored files in S3 and automated build and deployment with Docker and CI/CD.
- Added 2FA, role-based access for six roles, watermarking and audit logging with live WebSocket sync; removed the two-day wait for original documents before loan processing.

Bank Payment Automation (CEFT/SWIFT) — Secured REST APIs · SQL

- Owned the secured API architecture and approval workflow; GL records written automatically and every payment stored separately for traceability.
- Cut processing from 1-2 business days to 4-5 minutes and removed all manual documentation.

FinAb Mobile Financing Product — PHP · REST · SQL · live Feb 2026

- Owned it end to end: requirements, application flow, document upload, status tracking, notifications, operations dashboard and automated credit check.
- Secured the APIs with authentication headers and cleared VAPT findings before release. Impact: about LKR 70M in sales; a 10-hour process cut to about 20 minutes.

Merchant Payment Gateway Integration — Webhooks · SQL · full stack

- Integrated callbacks, transaction status, refunds, voids and real-time reconciliation, secured with hosted checkout, tokenisation, idempotent processing, retries and an audit trail.
- Built the customer portal with Cursor and Claude. Impact: 98%+ payment success and less manual reconciliation.

CRIB Credit Bureau Customer Viewer · project lead — PHP · SQL · Redis · 2FA

- Led delivery and mentored junior developers; integrated the CRIB API with 2FA, role-specific dashboards and Redis caching with a 30-day re-check rule.
- Impact: latency down 35%, 100+ employees served, 10,000+ daily API calls.

EDUCATION

MSc in Computer Science
International Master's Degree Programme in Information Technology, University of Eastern Finland, Joensuu
In progress

BSc (Hons) in IT, Software Engineering
SLIIT, Sri Lanka · Second Class Upper Division
2021 - 2025

CERTIFICATIONS

Microsoft Applied Skills: Secure AI solutions in the cloud

Microsoft Applied Skills: Get started with cloud security and monitoring tasks

LANGUAGES

English · Expert (IELTS 7.0)

Finnish · Basic

AWARDS & SERVICE

Dean's List (2024)

Rotaract International Service Director

PUBLICATIONS

Improving Fake News Detection with a Mixture of Experts: Leveraging Sentiment Analysis and Sarcasm Detection as Core Expert Models. IEEE, ICAC 2024.

User Based Sale Optimization for Fashion Retail. Propulsion Technology Journal, Vol. 44, No. 5 (2023).

EXPERIENCE, CONTINUED

Abans Finance PLC · Senior Executive, Software Engineer (Full-Stack)

High-Volume Reporting System — React · PHP · SQL · caching · 2FA

- Dynamic schema generation and a caching layer cut report generation from 4 hours to 15 minutes across 1M+ monthly transactions.

GL Reconcile · payment reconciliation web app — Python · SQL

- Built the full application to match bank payment reports against the general ledger for finance. Public demo: gl-viewereight.vercel.app

Leasing Trial Calculator · web app and mobile component — Angular · TypeScript

- Shipped the same calculation on web and mobile through shared logic and a single backend API, a reusable pattern that kept behaviour consistent. Unit tests with Jest and JUnit.

Mobile apps · field officers and customer banking — Flutter · Kotlin · Swift

- Rebuilt a marketing and recovery officers' app in Flutter with Python and C# services, JWT and Microsoft Authenticator sign-in and geo-tagged route tracking (more than 2x time saved).
- Built Android (Kotlin) and iOS (Swift) banking apps with OTP verification and biometric authentication.

Purchase Order System · IT Infrastructure Task Manager — REST · Slack · MySQL

- Role-based approval workflows, real-time notifications and PDF generation (approval delays down 40%).
- Replaced an Excel workflow with REST APIs and Slack integration; MySQL queries from 2 minutes to 15 seconds (team productivity up 30%).

Across all work

- Automated builds, tests and deployments with GitHub Actions; hosted services on Huawei Cloud; 12+ internal systems delivered.
- Gathered requirements with finance, operations and marketing, and provided production support alongside development.
- Used Cursor and Claude daily for boilerplate, tests, debugging, code review and SSDLC work, always reviewing generated code myself.

Software Engineer Intern — 2023 · 6 months

Cerfel (Pvt) Ltd.

- Delivered 19 full-stack applications (React, TypeScript, Node.js, PostgreSQL) with custom admin panels.
- Refactored code, added React Query and caching, and documented workflows and API specs: performance up 40%, new-developer onboarding time down 25%.

PROJECTS & RESEARCH

Fake News Detection, Mixture of Experts — IEEE ICAC 2024

- Wrote the paper and built and tested the models; shipped the platform (NestJS, React, browser extension, mobile app) as Docker microservices with a Jenkins CI/CD pipeline. DOI 10.1109/ICAC64487.2024.10851056

Collaboard, real-time whiteboard — React · Socket.IO · MongoDB

- Collaborative drawing with sub-100 ms latency.

Clothing Store E-Commerce — Spring Boot · React · Stripe · Docker

- Full-stack shop with MongoDB, TypeScript front end and Stripe payments. Source: github.com/SansikaDev
